CSS Part 1:-
CSS-Cascading Style Sheets
Why cascading?
Because multiple style rules can apply to the same HTML element, a process called the cascade decides which rule is finally applied.

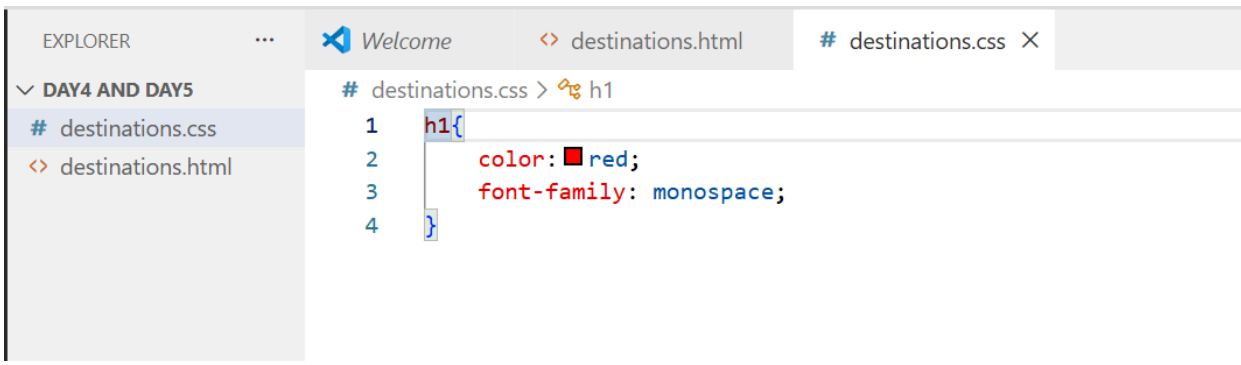
<h1> is a tag but h1 is a selector.

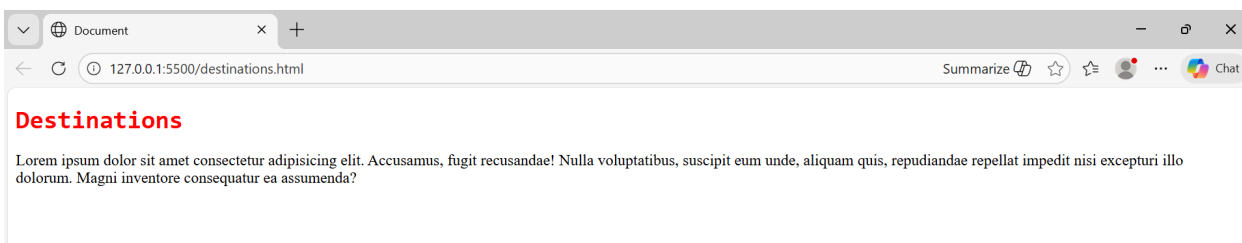
How to write a css?
Selector{
*/*write styles that you need(property)*/*
}

Example:-
```
h1{
    Text-align:center;
}
```
Here : text-align is a property and center is the value

CSS is used for the following :-
To change the
1.Font
2.Text
3.Background
4.Border
5.Height,width,margin,etc
6.Template Layout
7.List and markers
8.Animations
9.Transitions

Types of selectors:-
1.Element selector [group multiple elements]
2.Id selector
3.Class selector





CSS Part 2 and Part 3:-

“ * ” is called a universal selector and the formatting is applied to whole page.

CSS Part 4:-
Animations in CSS
@keyframes rules :- specifies the animation code.
Created by changing one set of css styles to other.
With the help of keywords “from”->”to”

Example :-

```
@keyframes fadeIn{
   0%{opacity:0;}
   100%{opacity:100;}
}
```

Animate.html

```
<!DOCTYPE html>
<html lang="en">

<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Document</title>
</head>

    }
    50%{
        transform: translateX(100px);
    }
    100%{
        transform: translateX(0);
    }
}

.fade-in-element {
    animation: fadeIn 3s ease-in-out;
    background-color: tomato;
