Django Overview

- **Django** is a web development framework from Python.
- It is a **powerful framework** that offers an **inbuilt web server** for development purposes.
- A Django project runs on a **browser**, hence it is a **web application.**
- There are other frameworks provided by Python such as **Flask**, which is also used for web development.
- Use the command:
  pip install django
  to install Django.
- To learn more about Django, visit:
  👉 https://www.djangoproject.com/

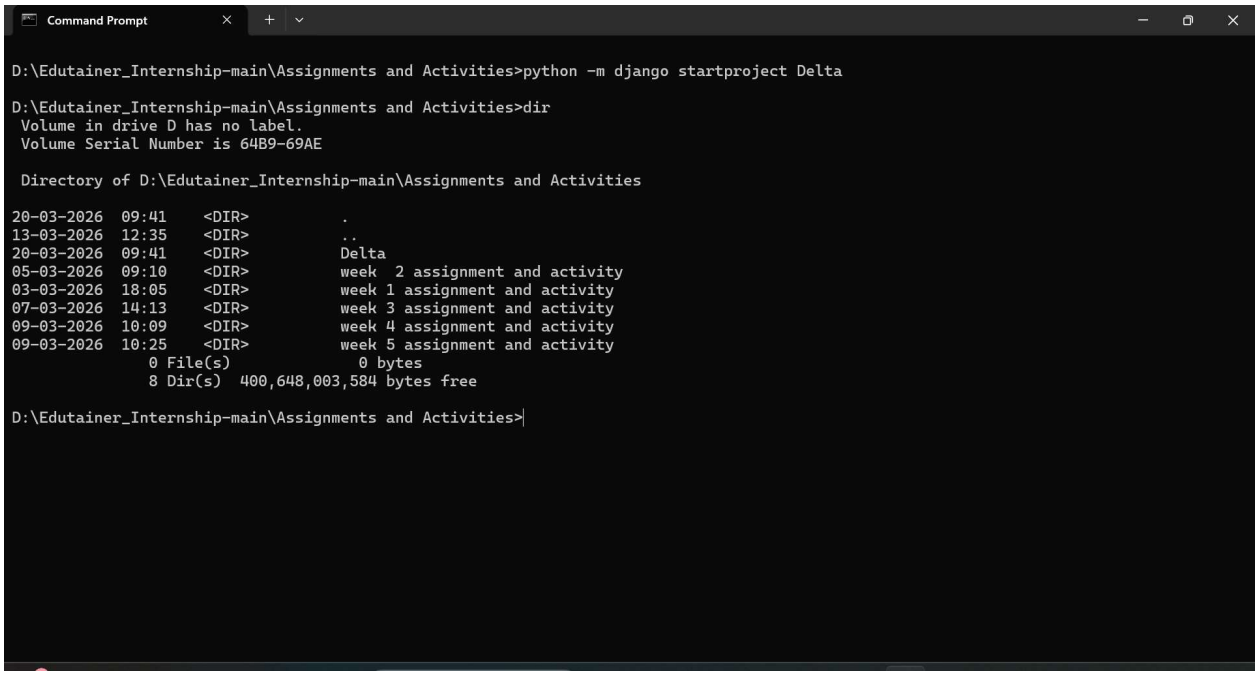
Creating a django project:-

First install django

- pip install django

Create ur first project using the command.

- python -m django startproject Delta



```
Command Prompt - python r

 Directory of D:\Edutainer_Internship-main\Assignments and Activities

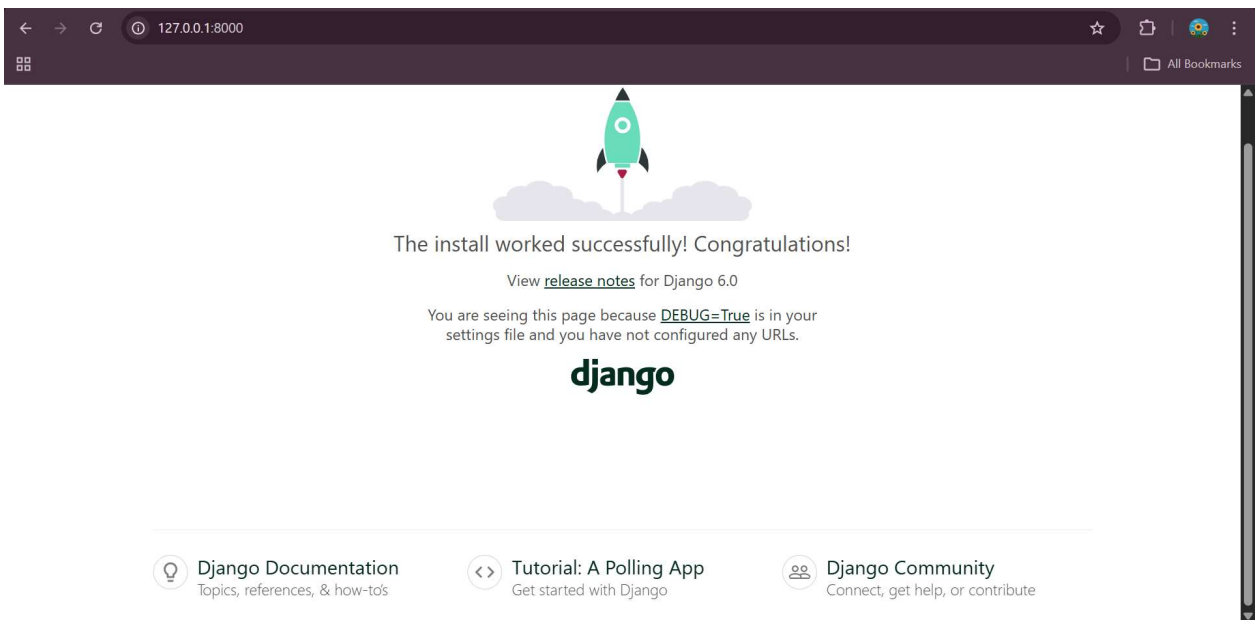
System check identified no issues (0 silenced).

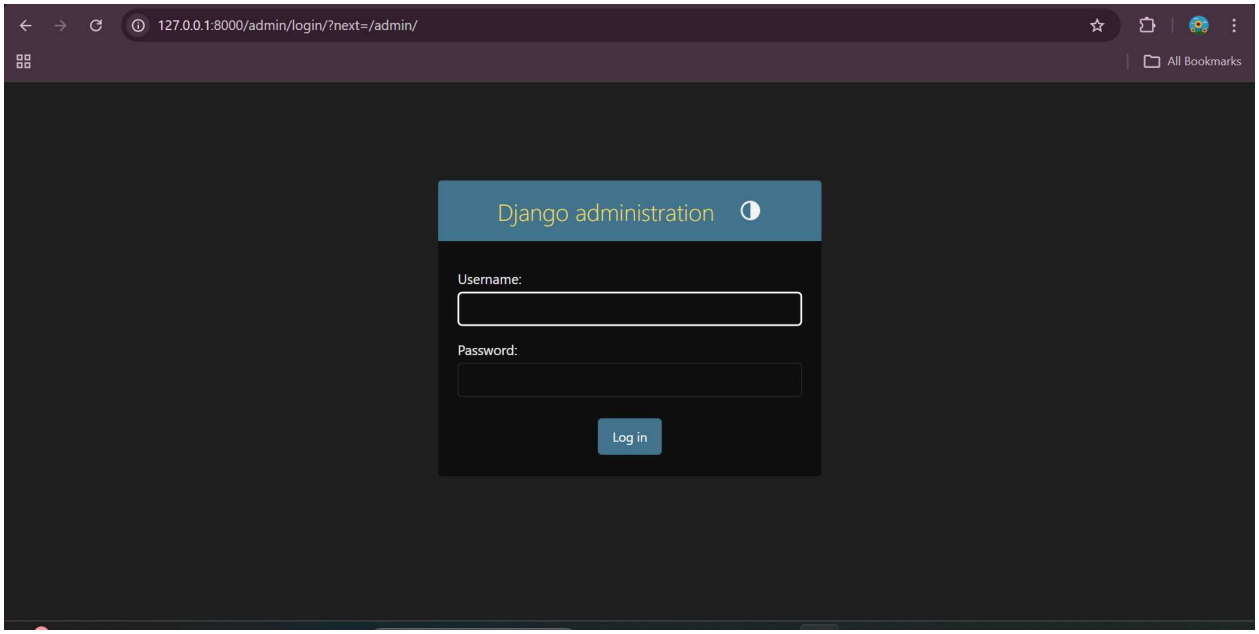
You have 18 unapplied migration(s). Your project may not work properly until you apply the migrations for app(s): admin, auth, conten
ttypes, sessions.
Run 'python manage.py migrate' to apply them.
March 20, 2026 - 09:44:31
Django version 6.0.3, using settings 'Delta.settings'
Starting development server at http://127.0.0.1:8000/
Quit the server with CTRL-BREAK.

WARNING: This is a development server. Do not use it in a production setting. Use a production WSGI or ASGI server instead.
For more information on production servers see: https://docs.djangoproject.com/en/6.0/howto/deployment/
```



for the server http://127.0.0.1:8000/ add /admin to that

http://127.0.0.1:8000/admin



U get this page

To login u need credentials

For that:-

Use this command

python manage.py migrate

Then try to create a superuser using this command

python manage.py createsuperuser

Give the credentials

Then u get a message like superuser created successfully.

Use these credentials to login to the page.

Click users.

U can see ur credentials
