MINI-PROJECT : 1

Create a **GUI interface for a To-Do List application** using Python.

The application should:

- allow the user to enter a task
- add the task to a list
- delete the selected task from the list
- display all tasks in a list box

Use Python's **Tkinter** library to build the graphical interface.

Solution:-

```
import tkinter as tk

from tkinter import END, Listbox, Entry, Button, Label

def add_task():

    task = task_entry.get()

    if task != "":

        task_listbox.insert(END, task)

        task_entry.delete(0, END)

def delete_task():

    selected_task = task_listbox.curselection()

    if selected_task:

        task_listbox.delete(selected_task)
```

```
root = tk.Tk()

root.title("To-Do List")

root.geometry("400x300")

label = Label(root, text="Enter task")

label.pack(pady=5)

task_entry = Entry(root, width=30)

task_entry.pack(pady=5)

add_button = Button(root, text="Add Task", width=20, command=add_task)

add_button.pack(pady=5)

delete_button = Button(root, text="Delete Task", width=20,
command=delete_task)

delete_button.pack(pady=5)

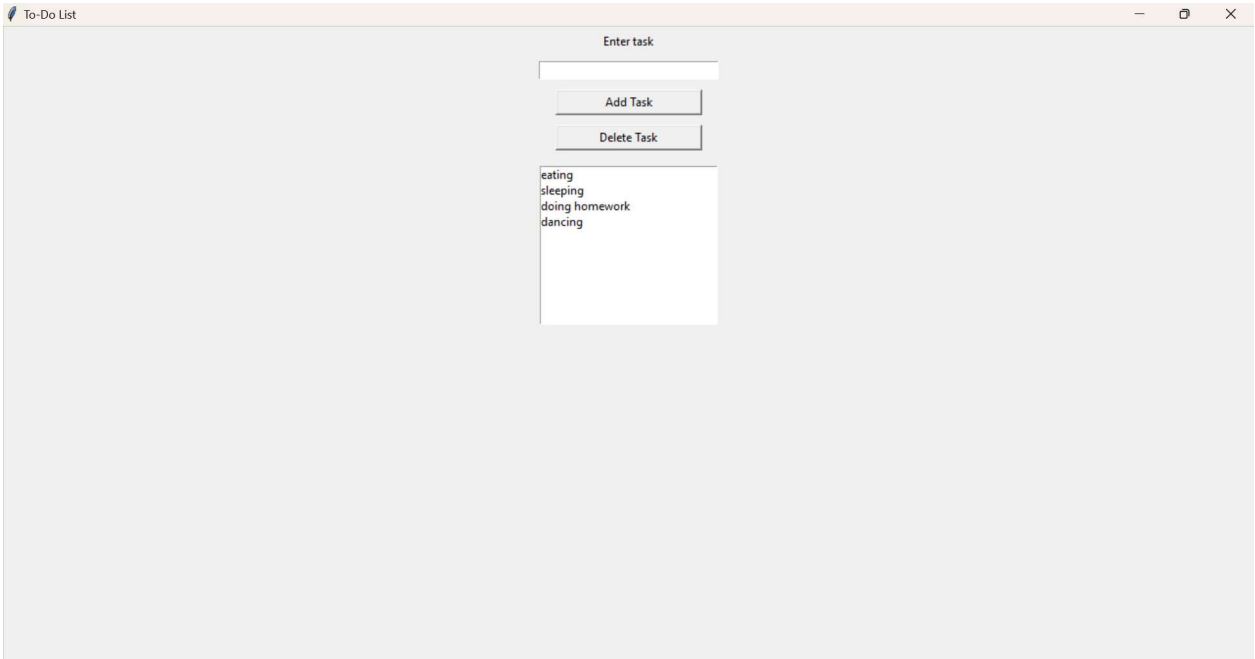
task_listbox = Listbox(root, width=30, height=10)

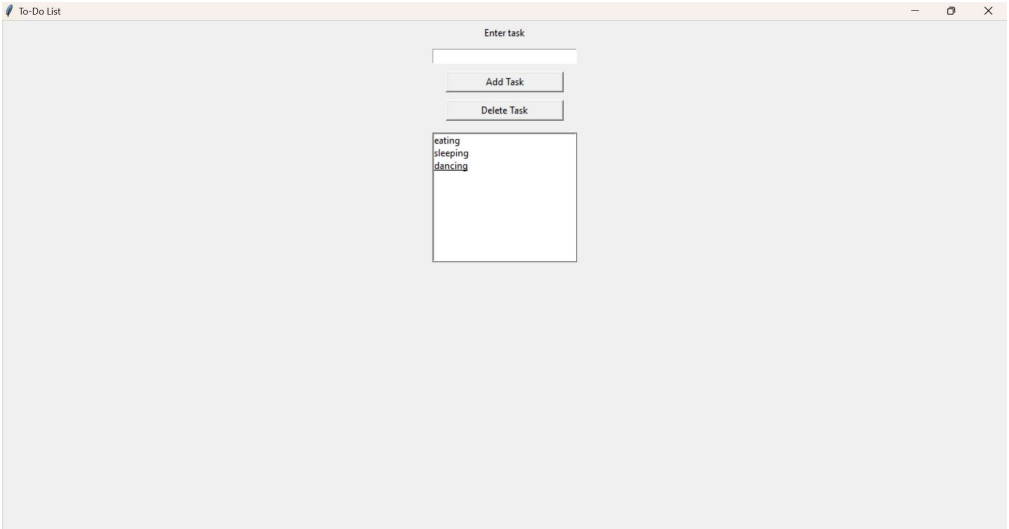
task_listbox.pack(pady=10)
```

```
root.mainloop()
```

output:-

Added 4 tasks





Deleted task 3
