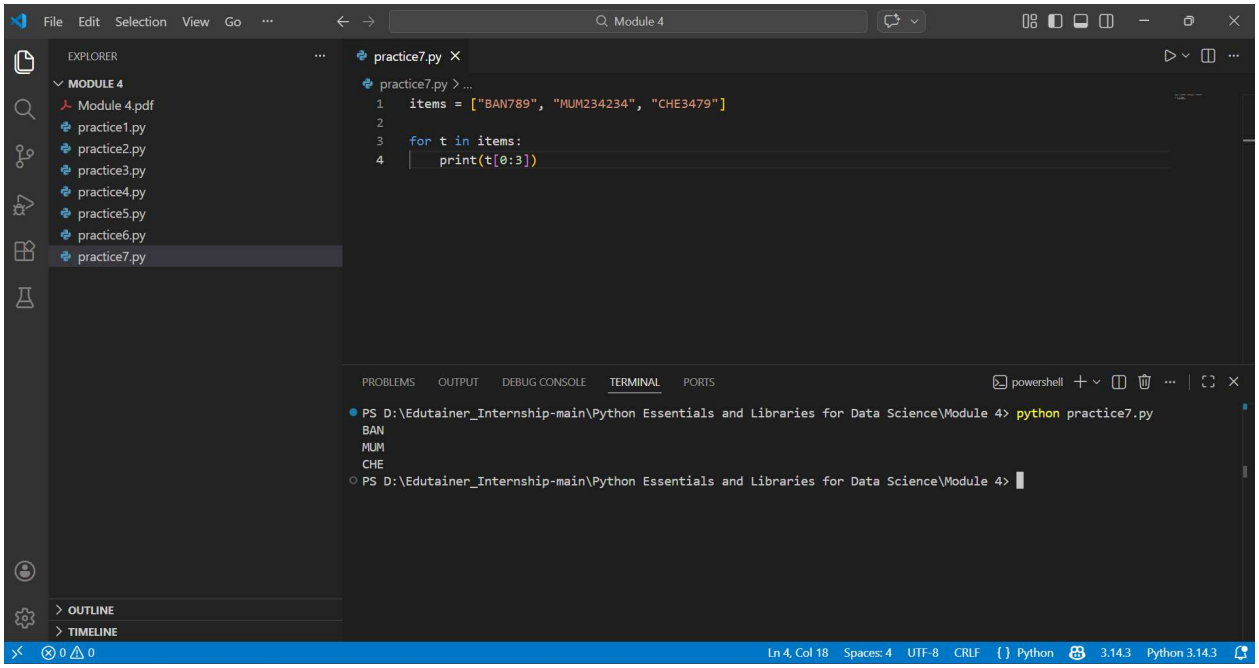
Python Library Functions:-

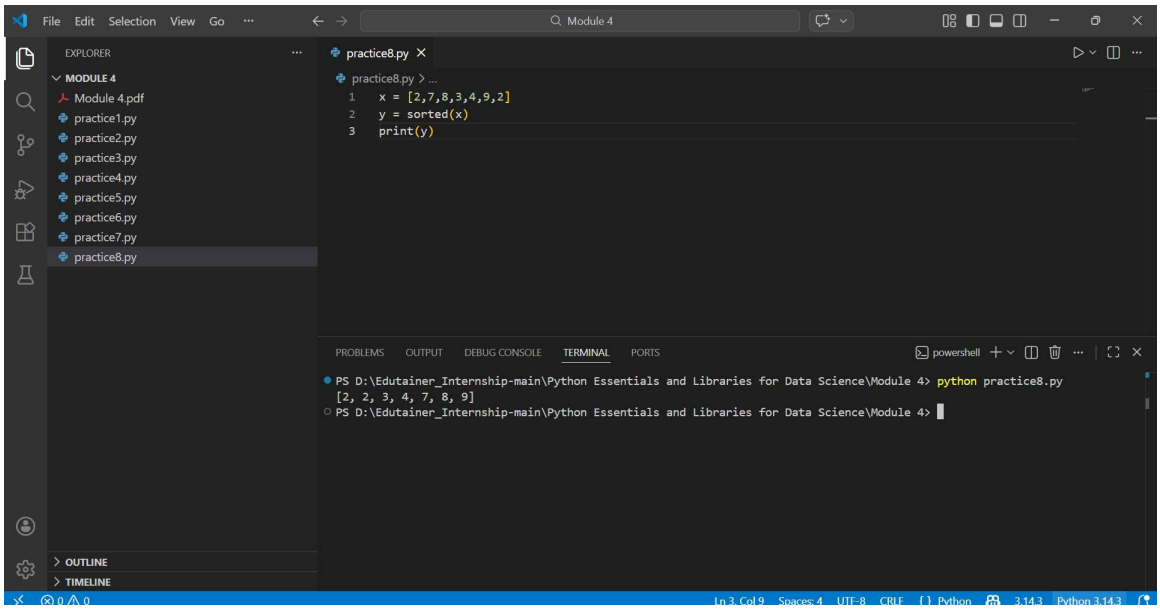
1.slice()

Display only the city code in the item names below using slicing.



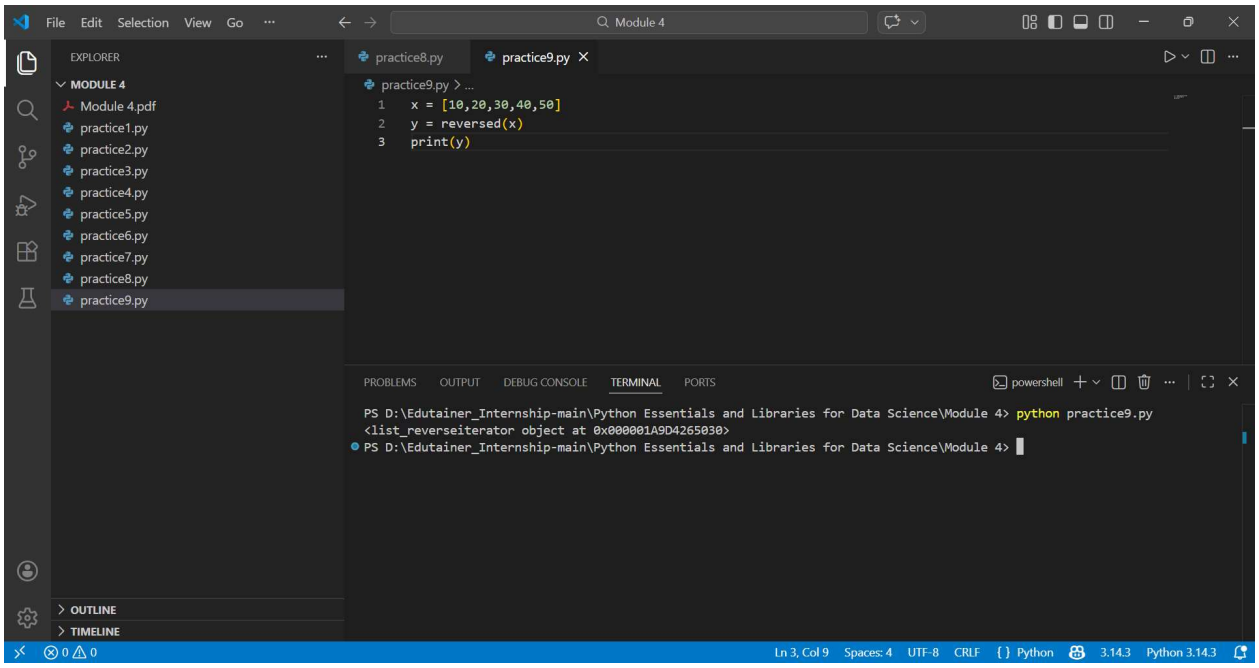
2.sorted()

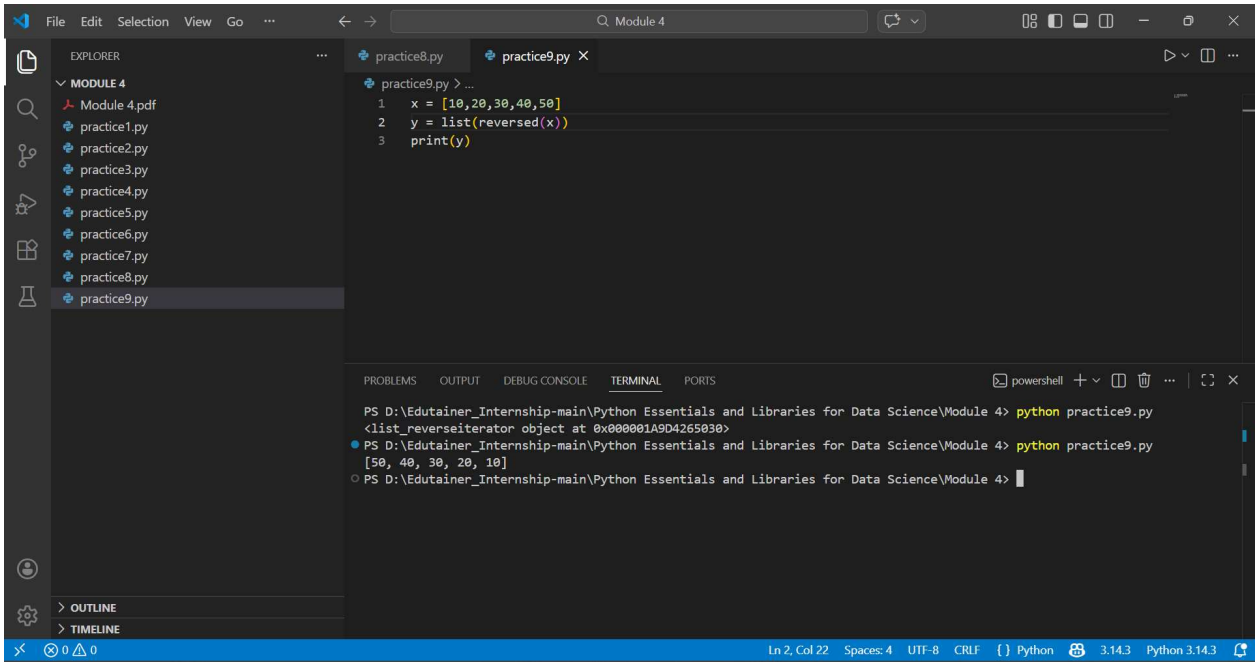
The sorted() function in Python is used to sort elements of an iterable (such as a list, tuple, string, or dictionary) and return a new sorted list.sorted() and sort() does the same thing but sort()is a method and sorted() is a function.



3.reversed()

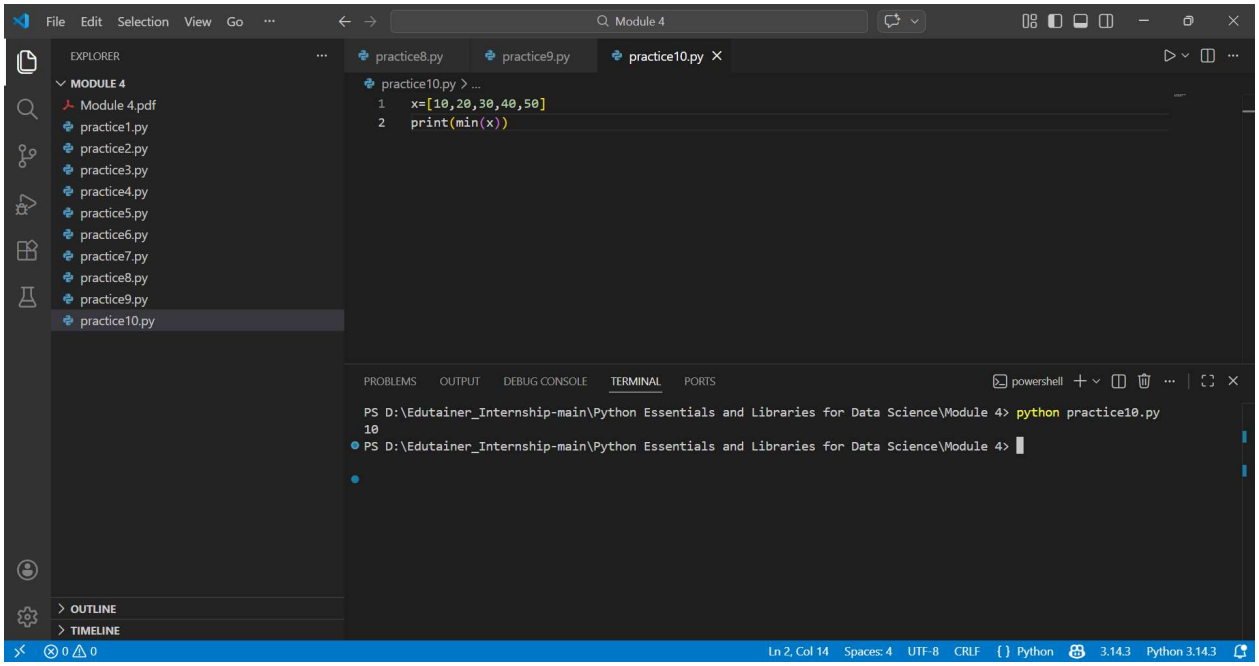
The reversed() function returns a reverse iterator of the list elements.reversed() is a function and reverse() is a method.





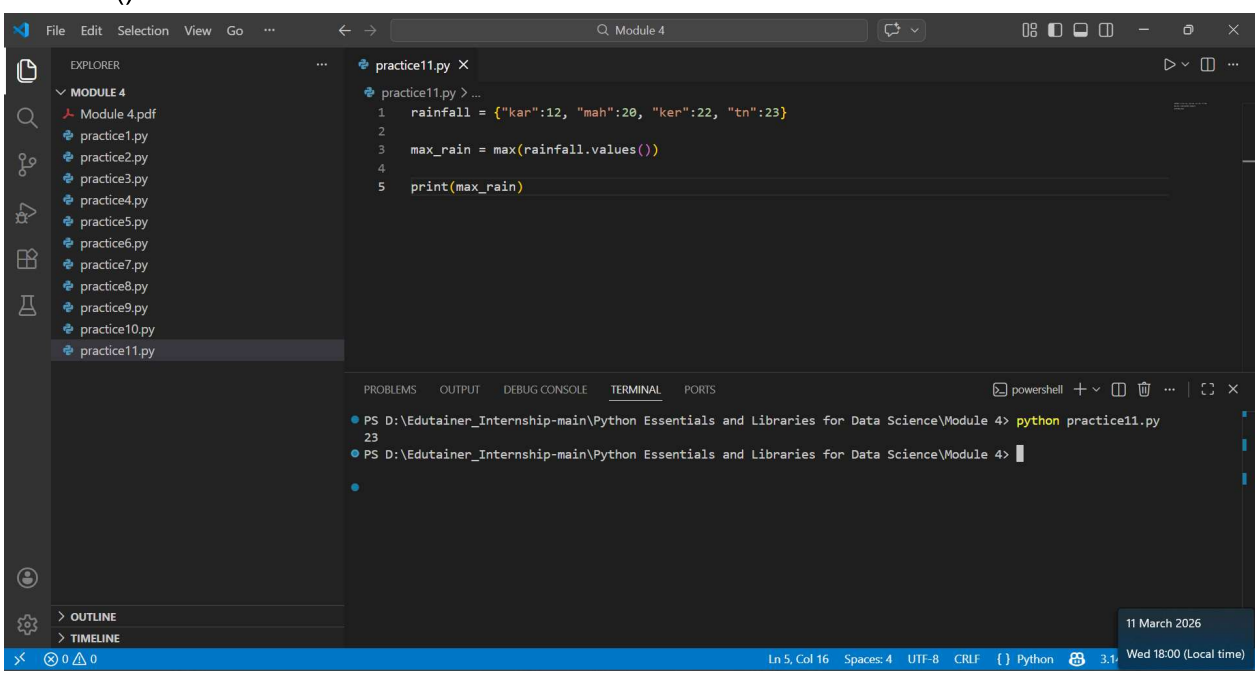
4.min()

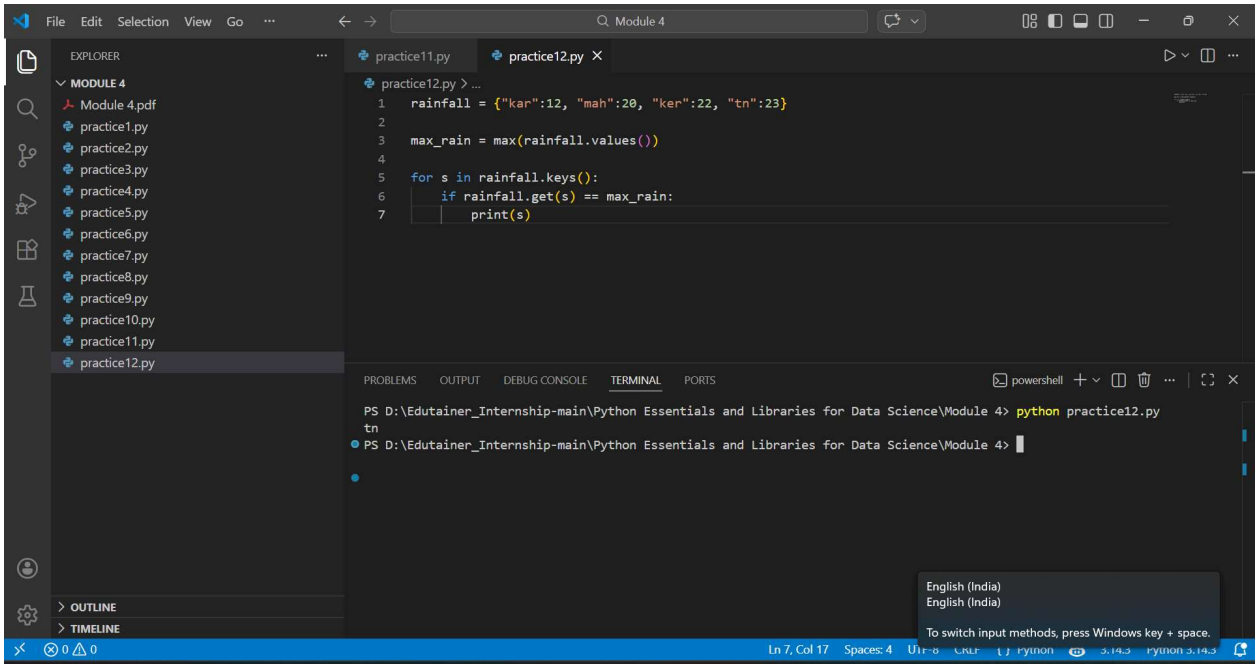
The min() function is used to find the minimum value.



5.max()

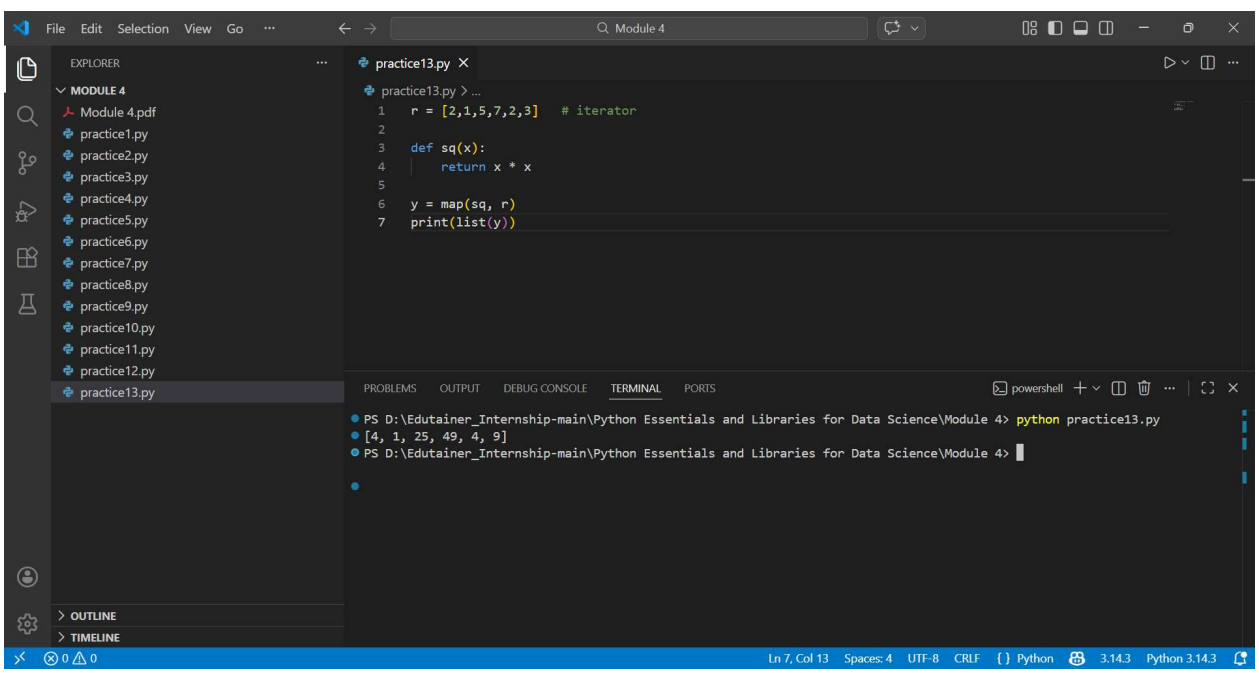
The max() function is used to return the maximum value.

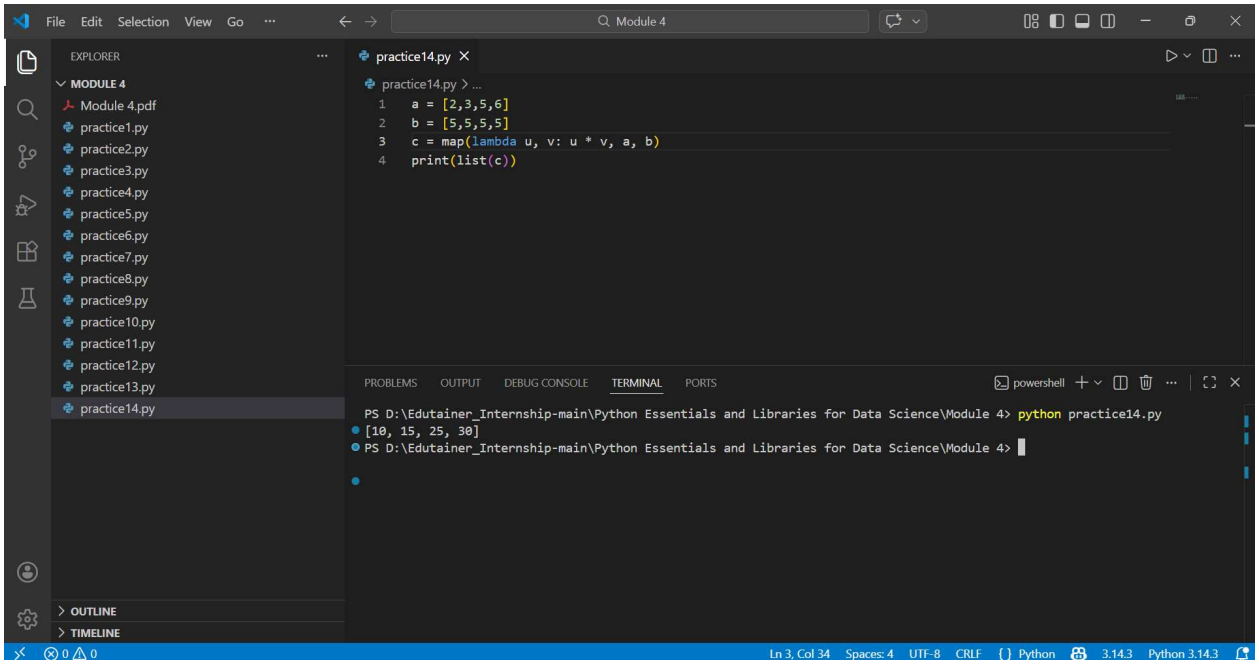


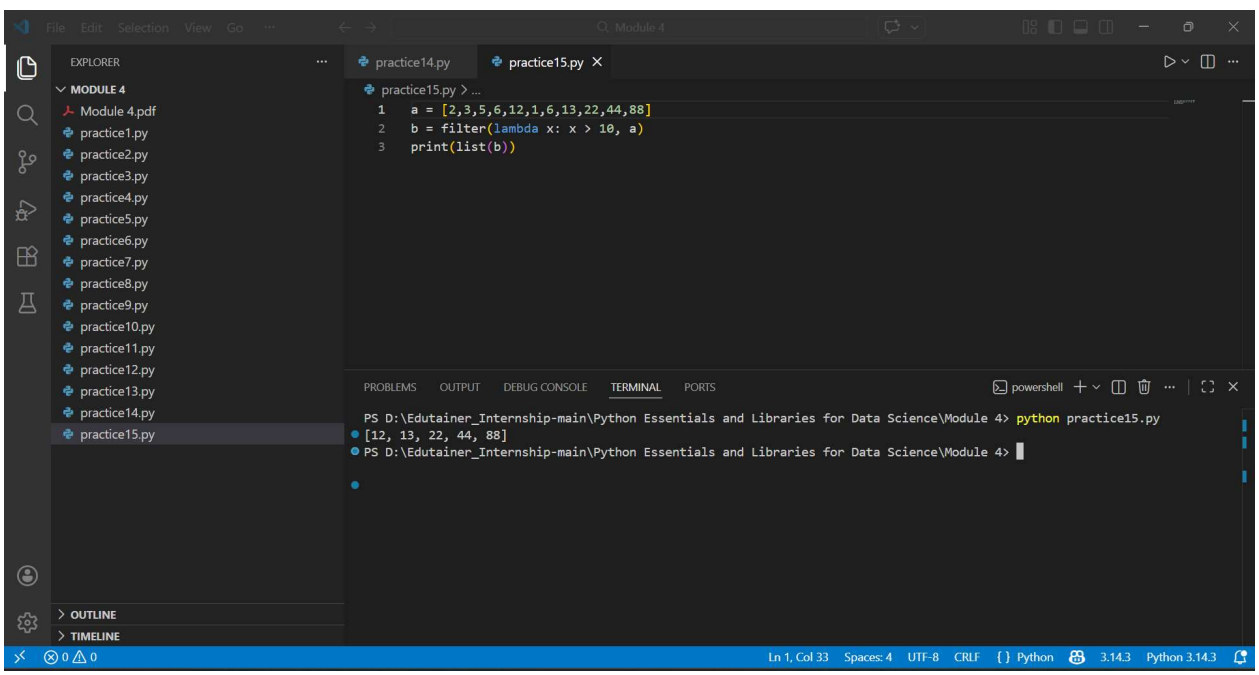


6.map()

The map() function applies a given function to every item in an iterable (like a list) and returns a map object (iterator) containing the results.





7.filter()


The filter() function is used to select elements from an iterable based on a condition.
